

Billing & Inventory Technology for the New Retail Format

Market Survey & Vendor Recommendation — Flagship Store, Gujarat

Prepared 18 August 2026 · Scope: POS billing + inventory hardware & software — single-store launch with a multi-store roadmap across Gujarat

Executive Summary

You're evaluating billing and inventory technology for a new store format — a premium, multi-brand “lifestyle provisions” store carrying your three in-house brands (health gummies; sweets, healthy snacking & namkeen; energy drink) alongside third-party and imported products, launching as one flagship store in Gujarat with gradual expansion planned.

Adler POS, the option you were referred, is a genuine and competitively priced Indian POS hardware manufacturer — touchscreen terminals, thermal printers, barcode scanners, cash drawers. But it is a hardware business first; its bundled software is general-purpose rather than built specifically for multi-brand, supermarket-style retail. This report treats the hardware and software decisions separately, surveys the credible Indian alternatives on both sides with current indicative pricing, and closes with a tiered recommendation and a vendor-evaluation checklist.

1. Business Snapshot

What this report is answering, distilled from your brief:

- **Own brands:** health gummies · sweets, healthy snacking & namkeen · energy drink
- **New format:** a multi-brand, import-forward “lifestyle provisions” store — your brands plus third-party and imported products, premium/rich layout, positioned above an ordinary kirana or supermarket
- **Rollout:** one flagship store first, gradual expansion across Gujarat
- **Core technology need:** (1) fast, accurate billing at the counter, and (2) inventory visibility/tracking across a wide, frequently changing SKU mix — hardware and software for both
- **Trigger for this report:** Adler POS was recommended for this ask; you want a wider, competitively priced market comparison before deciding

2. Evaluating the Referred Option — Adler POS

Adler POS India Pvt. Ltd. (incorporated 2018, based in Kochi, Kerala; trades as AdlerPOS) manufactures and distributes point-of-sale hardware — all-in-one touchscreen terminals (its Hertz series runs roughly ₹35,000–58,000 per unit), thermal receipt printers, barcode scanners, cash drawers and pole displays. It also bundles a cloud-based software layer for inventory, sales and customer management, and states it has served 500+ retail and hospitality businesses. Its Kochi outlet carries a 4.8/5 rating on Justdial (21 reviews).

Strengths

- Competitively priced, India-manufactured hardware — a full billing-counter kit (terminal + printer + scanner + drawer) available from one vendor
- Positive local reviews at its Kerala base; positioned to serve both retail and hospitality counters

Watch-outs

- Its business and service base is in Kochi, Kerala — roughly 2,000 km from Ahmedabad. Get written confirmation of on-ground warranty/AMC turnaround time in Gujarat before signing
- The bundled software is general-purpose, not a dedicated supermarket/multi-brand retail system — no confirmed depth on weighing-scale integration, multi-store HQ control or automated reordering, which are central to your ask

- Best used as one of 2–3 hardware quotes, paired with a purpose-built software choice from Section 4 below

3. Market Survey — Software Platforms

India's billing-and-inventory software market splits into three broad tiers: budget GST-billing apps built for single-counter kirana shops; mid-market supermarket/retail specialists built for exactly your kind of multi-category provisions format; and enterprise multi-brand retail ERPs built for chains once they've moved past their first handful of stores. One structural shift worth knowing: GoFrugal — long India's best-known supermarket POS — was folded into Zoho as a division between 2023 and 2025, so its roadmap is now converging with Zoho's own POS/Inventory line rather than competing against it.

Provider	Best Fit	Indicative Pricing (India)	Multi-Store & Inventory Depth	Key Note
GoFrugal <i>(now a Zoho division)</i>	Dedicated supermarket / grocery / provisions POS+ERP	Starter tier quoted ₹9,000–18,000/yr depending on source & edition; higher tiers custom-quoted	Strong — built-in weighing-scale & barcode support, centralised multi-store HQ control, auto reorder alerts	India's most-referenced supermarket specialist. Acquired by Zoho (2023–25); expect deeper Zoho integration ahead
Zoho POS + Zoho Inventory	Affordable cloud entry, general retail	POS ₹649–2,099/month; Inventory ₹1,499–4,999/month (billed annually)	Good — multi-warehouse from the Standard tier, native e-commerce/marketplace sync	Cheapest credible cloud option; same parent as GoFrugal, so the two product lines will likely converge
VasyERP	Cloud-native grocery / supermarket specialist	Plans from ₹12,999/yr	Good — weighing-scale & self-checkout features, multi-store, AI-based add-ons	Reliance Industries-backed; active Ahmedabad/Gujarat presence and support network
Ginesys	Multi-brand / lifestyle retail ERP (fashion, MBO, D2C)	Usage-based ~₹3.5–4.5/order line, or ~₹5,000/user/mo (min. 4 users); entry commonly quoted ₹7,000+/mo	Very strong — centralised multi-store, franchise & omnichannel control, built-in BI	Closest positioning match to a multi-brand lifestyle store (clients include Vmart, Soch, Manyavar, Mumuso). Priced for scale, not a single debut store
LOGIC ERP	Enterprise multi-store & omnichannel retail/distribution	Custom quote only	Very strong — HQ-controlled multi-store, warehouse management, marketplace integration	Documented scaling case studies (single store to 100-outlet chains); heavier implementation effort
Marg ERP	FMCG/pharma distribution + retail billing	One-time licence + annual renewal (module-dependent); quote-based	Solid — multi-godown stock, barcode, scheme/offer management	Useful if you also want to track your own gummies/namkeen/energy-drink dispatch alongside store billing. Interface feels dated next to newer cloud tools
HDPOS Smart	General retail POS + accounting	Priced per terminal; quote-based (one reseller listing showed ~₹23,000/month — verify directly, likely AMC-inclusive)	Good — barcode & weighing-scale interface, multi-company books	Well-regarded support; track record stronger in general/apparel retail than grocery-specific formats
Vyapar / myBillBook	Budget GST billing apps	~₹3,400–5,000/yr	Basic — billing + light stock tracking; limited reorder/inventory-control depth	Fine for one small counter; likely too light once you add a weighing scale and a wide multi-brand SKU mix

Provider	Best Fit	Indicative Pricing (India)	Multi-Store & Inventory Depth	Key Note
TallyPrime <i>(reference point, not a POS)</i>	Statutory accounting backbone	Silver ₹22,500 one-time + GST (~₹4,500/yr renewal); Gold ₹67,500 one-time + GST; rental from ₹750/mo	N/A on its own — almost always paired with a separate counter POS	Near-universal in Indian retail bookkeeping; every platform above is built to export or sync into it for your CA

A detail specific to your format: because you'll stock a wide, changing mix of imported and third-party SKUs (some carrying non-standard or foreign barcodes), weight whichever platform lets counter staff create a new item in a few seconds over one that assumes a static, pre-loaded catalogue.

4. Hardware, Indicative Costs & Compliance

Terminals, printers and scanners are largely commoditised and interchangeable across the software platforms above — so it's worth pricing hardware on its own rather than accepting a single bundled quote.

Component	Indicative Price (₹, ex-GST)	Note
All-in-one POS terminal / touchscreen billing machine	₹35,000 – 58,000	Adler's Hertz series sits in this band; TVS, Posiflex and other Windows-based terminals are comparably priced
Thermal receipt printer (80mm)	₹3,500 – 10,000	Epson, TVS and Xprinter are common; confirm ESC/POS driver support with whichever software you pick
Barcode scanner (1D/2D)	₹4,000 – 9,500	Pay the small premium for 2D — it also reads QR/UPI codes at the counter
Cash drawer	₹3,000 – 5,000	Standard RJ11 trigger cable from the printer
Verified weighing scale	₹8,000 – 25,000+	Mandatory (Legal Metrology Act) for loose-sold namkeen/snacks; must carry a current stamped verification
Indicative total per counter (excl. scale)	₹45,000 – 80,000	Budget for two counters at a debut flagship store

Two compliance points to build into the plan

- GST e-invoicing (via the government IRN portal) becomes mandatory only once your PAN-wide aggregate annual turnover crosses ₹5 crore in any financial year — unlikely in year one, but choose software that already supports it so you never need to re-platform later.
- Any weighing scale at the counter (needed for loose-sold namkeen/snacks) must be verified and stamped under the Legal Metrology Act, 2009, and re-verified periodically. Calibration agents are active in Ahmedabad, Surat and Rajkot.

5. Recommendation

1. Decouple hardware from software. Don't let one hardware quote decide your software stack — terminals, printers and scanners are commoditised; the software is where billing speed and inventory accuracy actually come from.

2. Shortlist three software platforms to demo, in this order:

- **GoFrugal** — closest off-the-shelf fit for a grocery/provisions-led, multi-SKU, multi-brand format; also the most future-proof, now that it sits inside Zoho
- **VasyERP** — a strong, competitively priced second opinion, purpose-built for Indian grocery/supermarket counters, with an active Gujarat support presence
- **Zoho POS + Inventory** — if you'd rather start lean on a single store and prove the format out before committing to heavier retail-specific spend

3. Keep in view for later — once you're past roughly 3–5 stores, or want franchise-grade, fashion-and-lifestyle-style multi-brand control: **Ginesys** or **LOGIC ERP**. Both cost more than a single debut store typically justifies.

4. Run TallyPrime in parallel for statutory books regardless of which POS you choose — nearly every option above is built to feed it, and your CA will likely expect it.

5. On Adler specifically: keep it as one of 2–3 hardware quotes, but get their Gujarat service/warranty turnaround confirmed in writing before committing, given their service hub sits in Kerala.

6. Before signing anything: demo with your actual SKU mix (loose namkeen + packaged imports + your three in-house brands), time an actual billing transaction, check the reorder-alert and multi-store-sync workflows, and confirm GST/e-invoice readiness so a future ₹5-crore turnover crossing or a second store doesn't force a re-platform.

6. Next Steps — Vendor Evaluation Checklist

- Get written quotes from 3 software vendors and 2 hardware vendors (including Adler)
- Ask each software vendor for a reference client running a comparable format — multi-brand, grocery-plus-lifestyle — ideally in Gujarat
- Confirm for each: offline billing mode, weighing-scale + barcode integration, multi-store readiness, GST/e-invoice readiness, and data-export terms if you switch later
- Confirm AMC/support SLA and the actual physical turnaround time for hardware repair in your city
- Pilot on a single counter for 2–4 weeks before rolling out across the full flagship store

Sources

Pricing and feature claims reflect vendor sites and Indian software-marketplace listings (Capterra, SoftwareSuggest, TechJockey) accessed in August 2026. Several sources showed differing figures for the same product (noted inline above) — reconfirm directly with each vendor before purchase, as Indian retail-software pricing changes frequently.
